

The Simple Tool That Solves Complicated Problems

Safely Loosen Over-tightened IV and Feeding Tube Connections
Without Damaging Lines or Risking Infection.

IV Lines & Central Lines

- Overtightened Connectors
- Sticky, Viscous Solutions (TPN, Blood, Propofol)
- Pediatric & High-Risk Patients
- Unsafe Workarounds

Feeding Tubes

- Stubborn, Sticky Connections
- Replacement of N/G Tubes if unable to disconnect
- Over-tightening Issues

Pain Points: Line Damage * Infection Exposure * Clinician Strain

The Yewtwist Solution

- 
Safe Disconnection
Loosens without damaging lines.
- 
Breaks Through Adhesion
Works with TPN, Blood & Thick Formulas
- 
Protects Fragile Patients
Ideal for Pediatrics & Critical Care.
- 
No More Tools!
Eliminates Forceps & Pliers
- 
Optimized Workflow
Does not disrupt nurse workflow

Clinical Value at a Glance

Patient Safety

- Reduces Infection Risk
- Prevents Line Damage

Staff Safety

- Eases Hand Strain
- Eliminates Unsafe Methods

Operational Efficiency

- Faster Procedures
- Fewer Disruptions

Stop Struggling with Stuck Connections.

Yewtwist - The Right Tool at the Right Time.
